

CLEAN AIR IN EUROPE

*we inhale
10,000 liters
of air/day*

Life after WHO 2021 AQG – What does science tell us?

 ERS
24th May, 2023

Zorana Jovanovic Andersen, Chair of the European Respiratory Society (ERS) Environment and Health Committee; Professor in Environmental Epidemiology, Department of Public Health, University of Copenhagen, Denmark

WHO 2021 AQG – main messages and beyond

WHO AIR QUALITY GUIDELINES

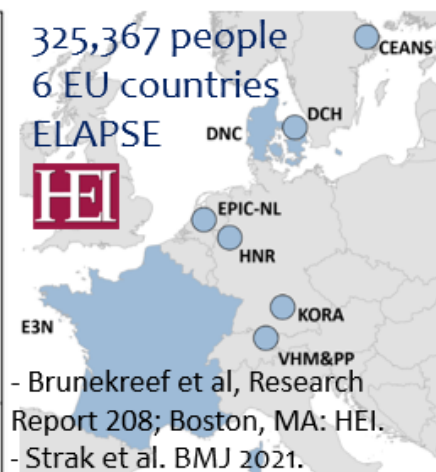

NO₂	2005: 40 $\mu\text{g}/\text{m}^3$, annual 2021: 10 $\mu\text{g}/\text{m}^3$, annual	
PM_{2.5}	2005: 10 $\mu\text{g}/\text{m}^3$, annual 2021: 5 $\mu\text{g}/\text{m}^3$, annual	

1. Everyone is exposed – no lower threshold

1. Everyone in Europe is exposed to harmful levels of air pollution (97.5% European population)
2. No lower threshold below which air pollution is safe

325,367 people
6 EU countries
ELAPSE

HEI

E3N

- Brunekreef et al, Research Report 208; Boston, MA: HEI.
- Strak et al. BMJ 2021.

2. Air pollution burden is huge, increasing & underestimated

- WHO 2005 AQG (Hoek et al. 2013): **6.2%***

- WHO 2021 AQG (Chen & Hoek 2020): **8.0%**

- ELAPSE (after WHO 2021 AQG): **11.8%**

- Stronger effects at low levels?

Global

EEA

2019: 307,000 deaths attributed to PM_{2.5}

2020: 412,000 deaths attributed to PM_{2.5}

238,000 deaths > 5 µg/m³ PM_{2.5}

EU

Figure 3. Total mortality and long-term PM_{2.5} from other European studies published since the WHO systematic review by Chen & Hoek (2020).*

*Red line indicates the summary estimate from the systematic review by Chen & Hoek (2020). Range of mean PM_{2.5} exposure from 5.8 to 20.5 µg/m³.
https://www.ersnet.org/wp-content/uploads/2022/04/Statement-HIA-by-ERS_ISEE_final-002.pdf
https://journals.lww.com/enviroepidem/Fulltext/2022/10000/Benefits_of_future_clean_air_policies_in_Europe_.5.aspx

*interpretation: 6.2 % increase in mortality risk for each 10 µg/m³ increase in PM_{2.5}

3. Air pollution and climate change – inseparable issues

WE BREATHE CLIMATE CHANGE

More people will die of **lung** diseases in our cities when high temperatures are combined with high levels of air pollution. This is especially true for those of us who are 65 and older.

 **Change in number of deaths from lung diseases in European cities (%) in association with high temperatures, by different levels of air pollution (PM2.5)**

EXHAUSTION
www.exhaustion.eu

 **The good news**
Policies that make us less exposed to heat and air pollution will be beneficial for our health and wellbeing.

LEGEND
Change in n° of deaths from lung diseases when we are exposed to moderate temperatures compared to:

- High temperatures and high air pollution
- High temperatures and medium air pollution
- High temperatures and low air pollution

Confidence interval: the estimate lies in this interval, with very high probability

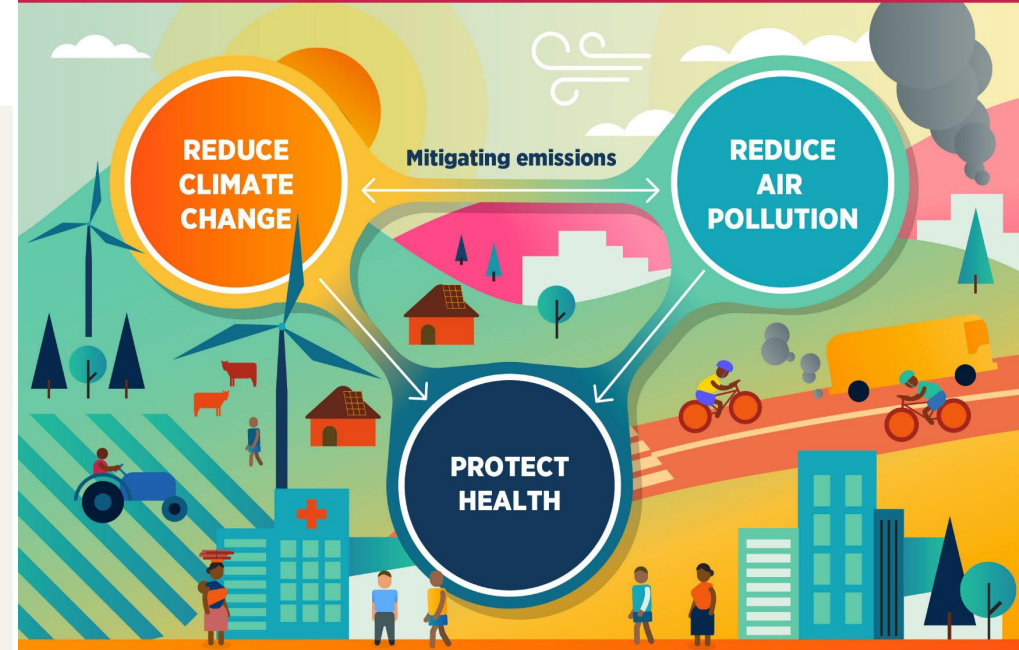

Moderate temperature level: in the study period, 75% of the days in the city have a temperature below this level (°C)

Overall estimate	Oslo	Rome	Berlin
20.2	15.3	25.7	20.2

High temperature level: in the study period, 1% of the days in the city have a temperature above this level (°C)

Overall estimate	Oslo	Rome	Berlin
26.4	21.7	29.6	27.1

REDUCING AIR POLLUTION AND MITIGATING CLIMATE CHANGE, TOGETHER HELP TO PROTECT OUR HEALTH

WHO Air Quality Guidelines set goals to protect millions of lives from air pollution.

CLEAN AIR FOR HEALTH

#AirPollution

UK, Comingsby, July, 2022
record T = 40.5 °C

Paris, February 2021

Evia/Greece, August 2021

Germany, July 2021

Health burden of air pollution

Premature deaths + millions of new cases of disease, symptoms, worsened quality of life, doctor visits, ER visits, hospital admissions, sick days (school & work), medication use....

Air Pollution and Lung (Erik)

- **Long-term (years, lifetime) exposure to air pollution** can lead to impaired lung function and development of new lung disease in healthy individuals and increased risk of dying from those diseases:

asthma, COPD, pneumonia, COVID-19, lung cancer

- **Short-term (hours, days) exposure to air pollution** can exacerbate existing lung disease in lung patients and trigger:

wheezing, cough, shortness of breath, need for medication, ER visits, hospitalizations, and death

16% asthma cases in children due to air pollution*

Ella Adoo-Kissi-Debrah: Air pollution a factor in girl's death, inquest finds

© 16 December 2020

Ella Adoo-Kissi-Debrah lived 25 metres from the South Circular Road in south-east London

A nine-year-old girl who died following an asthma attack has become the first person in the UK to have air pollution listed as a cause of death.

Ella Adoo-Kissi-Debrah, who lived near the South Circular Road in Lewisham, south-east London, died in 2013.

Ella Kissi-Debrah - 9 year old girl suffered fatal asthma attack triggered by air pollution, London, February 2013

Air pollution and cancer (Michelle)

European Commission

Strengthening Europe in the fight against cancer

EU Health Union: Europe's Beating Cancer Plan

#EUCancerPlan

3 FEBRUARY 2021

- Cancer causes 1 in 4 deaths in the EU (1.3 million cancer deaths in 2020)
- Air pollution is carcinogenic,* causes lung cancer and possibly other (breast, liver, blood, stomach, colon) cancers
- BECA - the EU Green Deal is a key tool to limit people's exposure to (air) pollution and prevent cancer,

GBD - 'fraction attributable' to air pollution

<https://www.stateofglobalair.org/>

"In 2020, while we were all fighting against the COVID-19 pandemic, many of us were fighting a silent battle. The battle against cancer. In 2020, we lost 1.3 million Europeans to this disease. And sadly, the number of cases is on the rise. This is why we present Europe's Beating Cancer Plan today. The fight of

“

Cutting pollution through the EU's Zero Pollution Action Plan and the Chemical Strategy for Sustainability as well as strong implementation of other existing EU policies would go a long way to reduce cancer cases and deaths. This would be an effective investment in our citizen's well-being.

Hans Bruyninckx, EEA Executive Director

”

NEWS

European Environment Agency

Exposure to pollution causes 10% of all cancer cases in Europe

Exposure to air pollution, second-hand smoke, radon, ultraviolet radiation, asbestos, certain chemicals and other pollutants causes over 10% of all cancer cases in Europe, according to a European Environment Agency (EEA) report published today. The good news is that these risks are preventable.

*International Agency for Research on Cancer (IARC) 'Air Pollution and Cancer' 2013

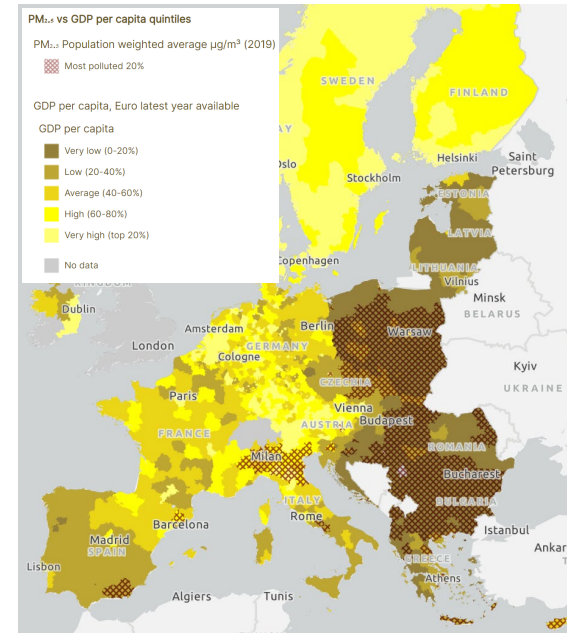

Emerging issues: air pollution and the brain (Barbara)

- Impaired neurocognitive development in children (learning difficulties, loss of IQ, ADHD, autism)
- Accelerated cognitive decline (dementia) elderly
- **Mental health (suicide, depression, anxiety)**

Everyone is exposed – some are more vulnerable

- Children
- Pregnant women
- Elderly
- Chronic diseases patients
- Poor (environmental inequality)

Conclusion

New AAQD, fully aligned with WHO 2021 AQG, is a major public and planetary health opportunity, that would:

1. prevent a substantial number of new cases of major NCDs
2. make EU citizens more resilient to seasonal influenza epidemics and COVID-19-like new pandemics
3. improve life of lung, heart, and other chronic disease patients
4. Indirect benefit for health - help mitigate unprecedented climate change impact on our health and our planet

Clean air as a basic civil right - no one should get sick or die from breathing
